

ELECTROLESS COPPER PLATING SOLUTIONABSTRACT

~~To provide an~~An electroless copper plating solution that is favorable to improve the adhesion of a plating film, ~~and an electroless copper plating solution which realizes uniform plating at a low temperature.~~ ~~This electroless copper plating solution~~ is characterized by containing a water-soluble nitrogen-containing polymer in an electroless copper plating solution, and preferably the above-mentioned electroless copper plating solution contains glyoxylic acid and phosphinic acid as reducing agents. The water-soluble nitrogen-containing polymer is preferably a polyacrylamide or a polyethyleneimine, ~~and,~~ preferably, its weight average molecular weight (Mw) is at least 100,000, ~~and~~ Mw/Mn is 10.0 or less.
